

Appendix B

Florida Research Foundation Pat. 7,062,251 Claim 1

<u>Claim Recitations</u>	<u>2019 PEG Analysis</u>
1. A method of integrating physiologic treatment data comprising the steps of:	The claim recites a method, which is a patent-eligible category.
receiving physiologic treatment data from at least two bedside machines;	This element can be construed as a mental process: a human being observes physiologic treatment data.
converting said physiologic treatment data from a machine specific format into a machine independent format within a computing device remotely located from said bedside machines;	Broadly, this “conversion” element can be performed with pen and paper, and thus, is a mental process.
performing at least one programmatic action involving said machine-independent data; and	This element also can be construed as a mental process, that “performs a programmatic action.”
presenting results from said programmatic actions upon a bedside graphical user interface.	This element can be performed with pen and paper.
